Re: Engineering Certification for Unirac's SFM, SunFrame Microrail (SFM)

DOTec Engineering, Inc. has reviewed Unirac's "SFM SunFrame Microrail Design & Engineering Guide" (PUB16APR29) and the SFM U-Builder on Unirac.com. The design methodology is acceptable for a code compliant racking structure supporting photovoltaic (PV) solar modules on pitched roofs for residential/commercial.

This certification excludes connections/attachments to the existing building structure and the effects on the existing structure components. All data, analysis, and information in the Design & Engineering Guide and in the U-Builder (online design tool) comply with the following:

- 2009 International Building Code, by International Code Council Inc. with the 2013 Connecticut Amendments, and The 2005 Connecticut State Building Code.
- ASCE/SEI 7-05 Minimum Design Loads and other Structures, by ASCE, 2005.
- 2010 Aluminum Design Manual (ADM), by the Aluminum Association, 2010

This letter certifies that the structural calculations contained within Unirac's "SFM SunFrame Microrail Design & Engineering Guide" and design reports generated by the U-Builder are in compliance with the above Codes.

If you have any questions on the above, please contact Unirac, Inc. or DOTec Engineering, Inc.

Certification by:
Dr. Ildefonso Al Gonzalez, P.E.
