

FLASHKIT PRO®

FLASHKIT SWITCHBLADE

The FLASHKIT PRO® and SWITCHBLADE deliver fast, code-compliant, and weather-resistant attachment solutions for composition shingle roofs. Compatible with both NXT UMount® and SOLARMOUNT® Systems, these traditional mechanical flashing attachments combine trusted roof protection with installation ease.

SHED & SEAL™ TECHNOLOGY

- Both FLASHKIT PRO and SWITCHBLADE feature raised ridges on the flashing that help divert water and snow away from the attachment point.
- Designed with **SHED & SEAL™** Technology, this trusted water-sealing flashing helps protect against roof leaks and provides dependable, long-term performance.

TWO OPTIONS. ONE TRUSTED SOLUTION.

- FLASHKIT PRO:** A traditional mechanical flashing solution designed for reliable, efficient installation across residential composition shingle roof applications.
- FLASHKIT SWITCHBLADE:** A slimmer mechanical flashing profile that requires less shingle prying and nail removal, helping installers work more efficiently when space is limited.

MIAMI-DADE APPROVED

- Approved for use in the High Velocity Hurricane Zone (HVHZ) of the Florida Building Code.
Miami-Dade NOA No. 25-0708.02
