U-BUILDER GO - IDEAL FOR ALL YOUR RAPID QUOTING NEEDS

CLICK ON THIS LINK TO ACCESS U-BUILDER GO
AND LOG IN USING YOUR CREDENTIALS

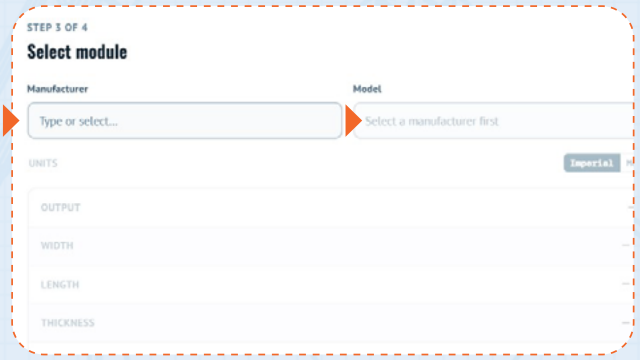

1. Start a new project by clicking the **+NEW PROJECT** button.
   Select from any of the 5 System Types

2. Enter the Project details:
   Project Name, Client Name, Installation Address

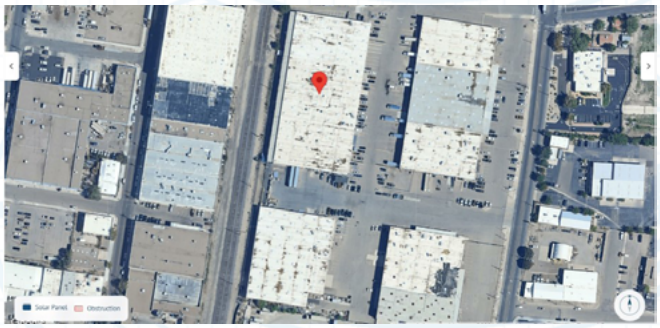

3. Select the Module Manufacturer and Model

4. Select the roof type and click **PARTS LIST**
   Note: Roof types will vary depending on pitched vs. flat roof systems

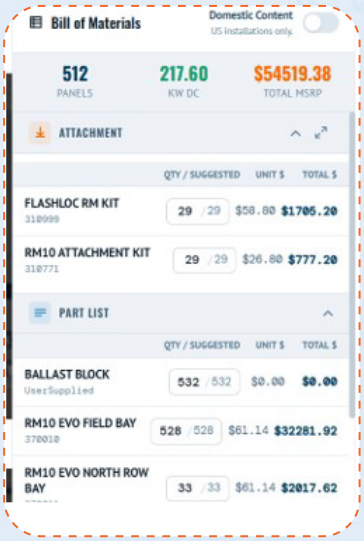

YOU ARE **READY TO DESIGN** YOUR PROJECT!!

Flat roof projects open in map view with a location pin placed at your address. Pitched roof projects open in a blank workspace where you can begin designing.

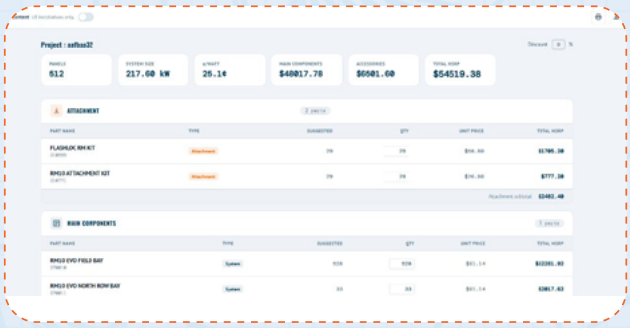

QUICK START GUIDE

U-BUILDER® GO - IDEAL FOR ALL YOUR RAPID QUOTING NEEDS

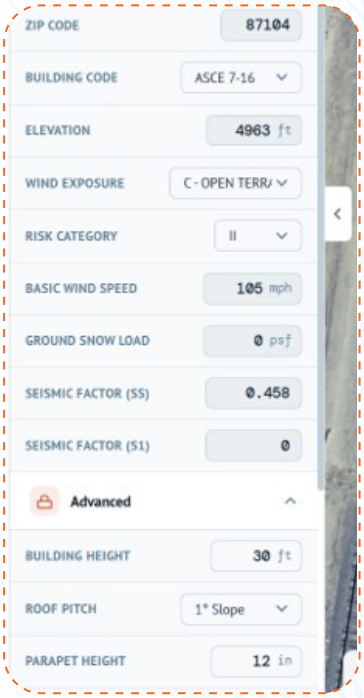

The live **BOM** feature gives you the power to choose between Domestic Content and Non-Domestic Content as you design your project.

When your design is complete, click COMPLETE BOM to create your project Bill of Materials.

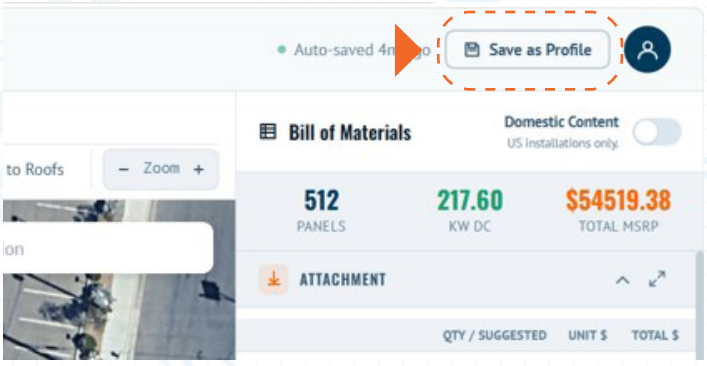

Easily update your BOM by adding or changing accessories, or return to your design to make adjustments before finalizing your project.

Download your BOM as a PDF or CSV file, or email it directly to your recipient.

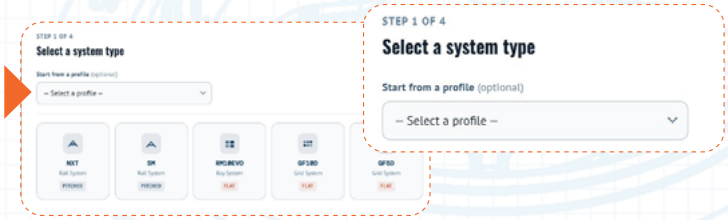

To help streamline your workflow, design inputs are preloaded using ASCE 7-16 as the default. If you need to adjust parameters such as ASCE 7-22, building height, or roof pitch, those options are available on the left side of the design page.

Before leaving U-Builder® GO or starting your next project, you can save your current project settings as a profile for future use.

From the BOM page, click GO BACK to access the **Save as Profile** button.

When you start a new project, your saved profile will be available so you can quickly apply the same project parameters, rename the project, and move straight into your design.
