

Introducing Unirac's Master Installer Program (MIP), an innovative training initiative that empowers participants to excel in the dynamic field of solar energy. Through rigorous training, MIP equips installers with cutting-edge training and skills in solar racking installation, design optimization, and system troubleshooting.

SAFETY: Receive comprehensive training on the optimal handling and utilization of Unirac products for both rooftop and ground installations.

QUALITY: Address the quality control measures and product features that guarantee a high-quality installation, while also minimizing the need for additional truck dispatches.

EFFICIENCY: Enhance the skills of your installation crews, empowering your team to become proficient in both the planning and implementation of Unirac systems.

APP-BASED TRAINING: Unirac's MIP courses are conveniently available on mobile devices or desktops, offering a user-friendly experience and easy progress tracking.

NABCEP® CE: Unirac provides continuing education NABCEP® accredited courses for installers, ensuring that they maintain current certification and stay up-to-date with industry developments.

TIME: Installers can complete both the Craftsman and Professional tiers in a **combined total** of just 8-10 hours.
